FLEYG HIGHWAY®

HOW DOES FLEYG HIGHWAY WORK

Steel road plates are indispensable on high-performance roads to guide trucks, heavy transporters and vehicles over obstacles on construction sites.

Up to now, steel plates were mostly built by filling up concrete ramps or not at all. This is either time-consuming, dangerous or expensive. Installed steel road plates using this method make a significant amount of noise when being crossed over and strong impact forces act on the chassis of the vehicles.

THE SOLUTION IS FLEYG HIGHWAY

The **FLEYG HIGHWAY**-Ramp is mainly made of rubber. The noise dampening effect is already integrated into the material. Crossings are much more pleasant for all motorists.

BENEFITS OF FLEYG HIGHWAY

Quick and easy to lay

Can be reused

Cost-saving compared to ramps made using a coating

Withstands the highest loads

FLEYG HIGHWAY is a Europe-wide patented product from FLEYG AG

FLEYG HIGHWAY®

SAFE – CONSISTENT – LOW COST

Asphalt

FLEYG HIGHWAY

Usability

Asphalt can only be used once or not at all on high-performance roads

FLEYG HIGHWAY can be used again and again

Flexibility

Asphalt has to be renewed and repaired again and again

FLEYG HIGHWAY can be laid quickly and used flexibly

Safety

- Strong blows when crossing
- Not easily visible to all road users
- Minimized blows when crossing
- Increased safety for road users
- Environmentally friendly
- Easy to lay

FLEYG HIGHWAY®

DATA SHEET

Type	FLEYG HIGHWAY
Material	Recycled rubber specially designed and created in-house with tensile/pressure-bearing properties
Surface	Water-repellent with pearl texture
Patent	FLEYG AG, Bäumleingasse 22, 4051 Basel
Technical Details	FLEYG HIGHWAY 1000 x 800 x 35 mm / 19 kg / equipped with 10 magnets
Features	<ul style="list-style-type: none">• Easy crossing of steel plates in demanding environments• Smooth crossings on high-performance roads• Quick and easy to lay• Sustainable and environmentally friendly• Can be reused again and again
